Intravenous therapy does not require special preparation.
The benefits for your body are evident within just a few hours.

46

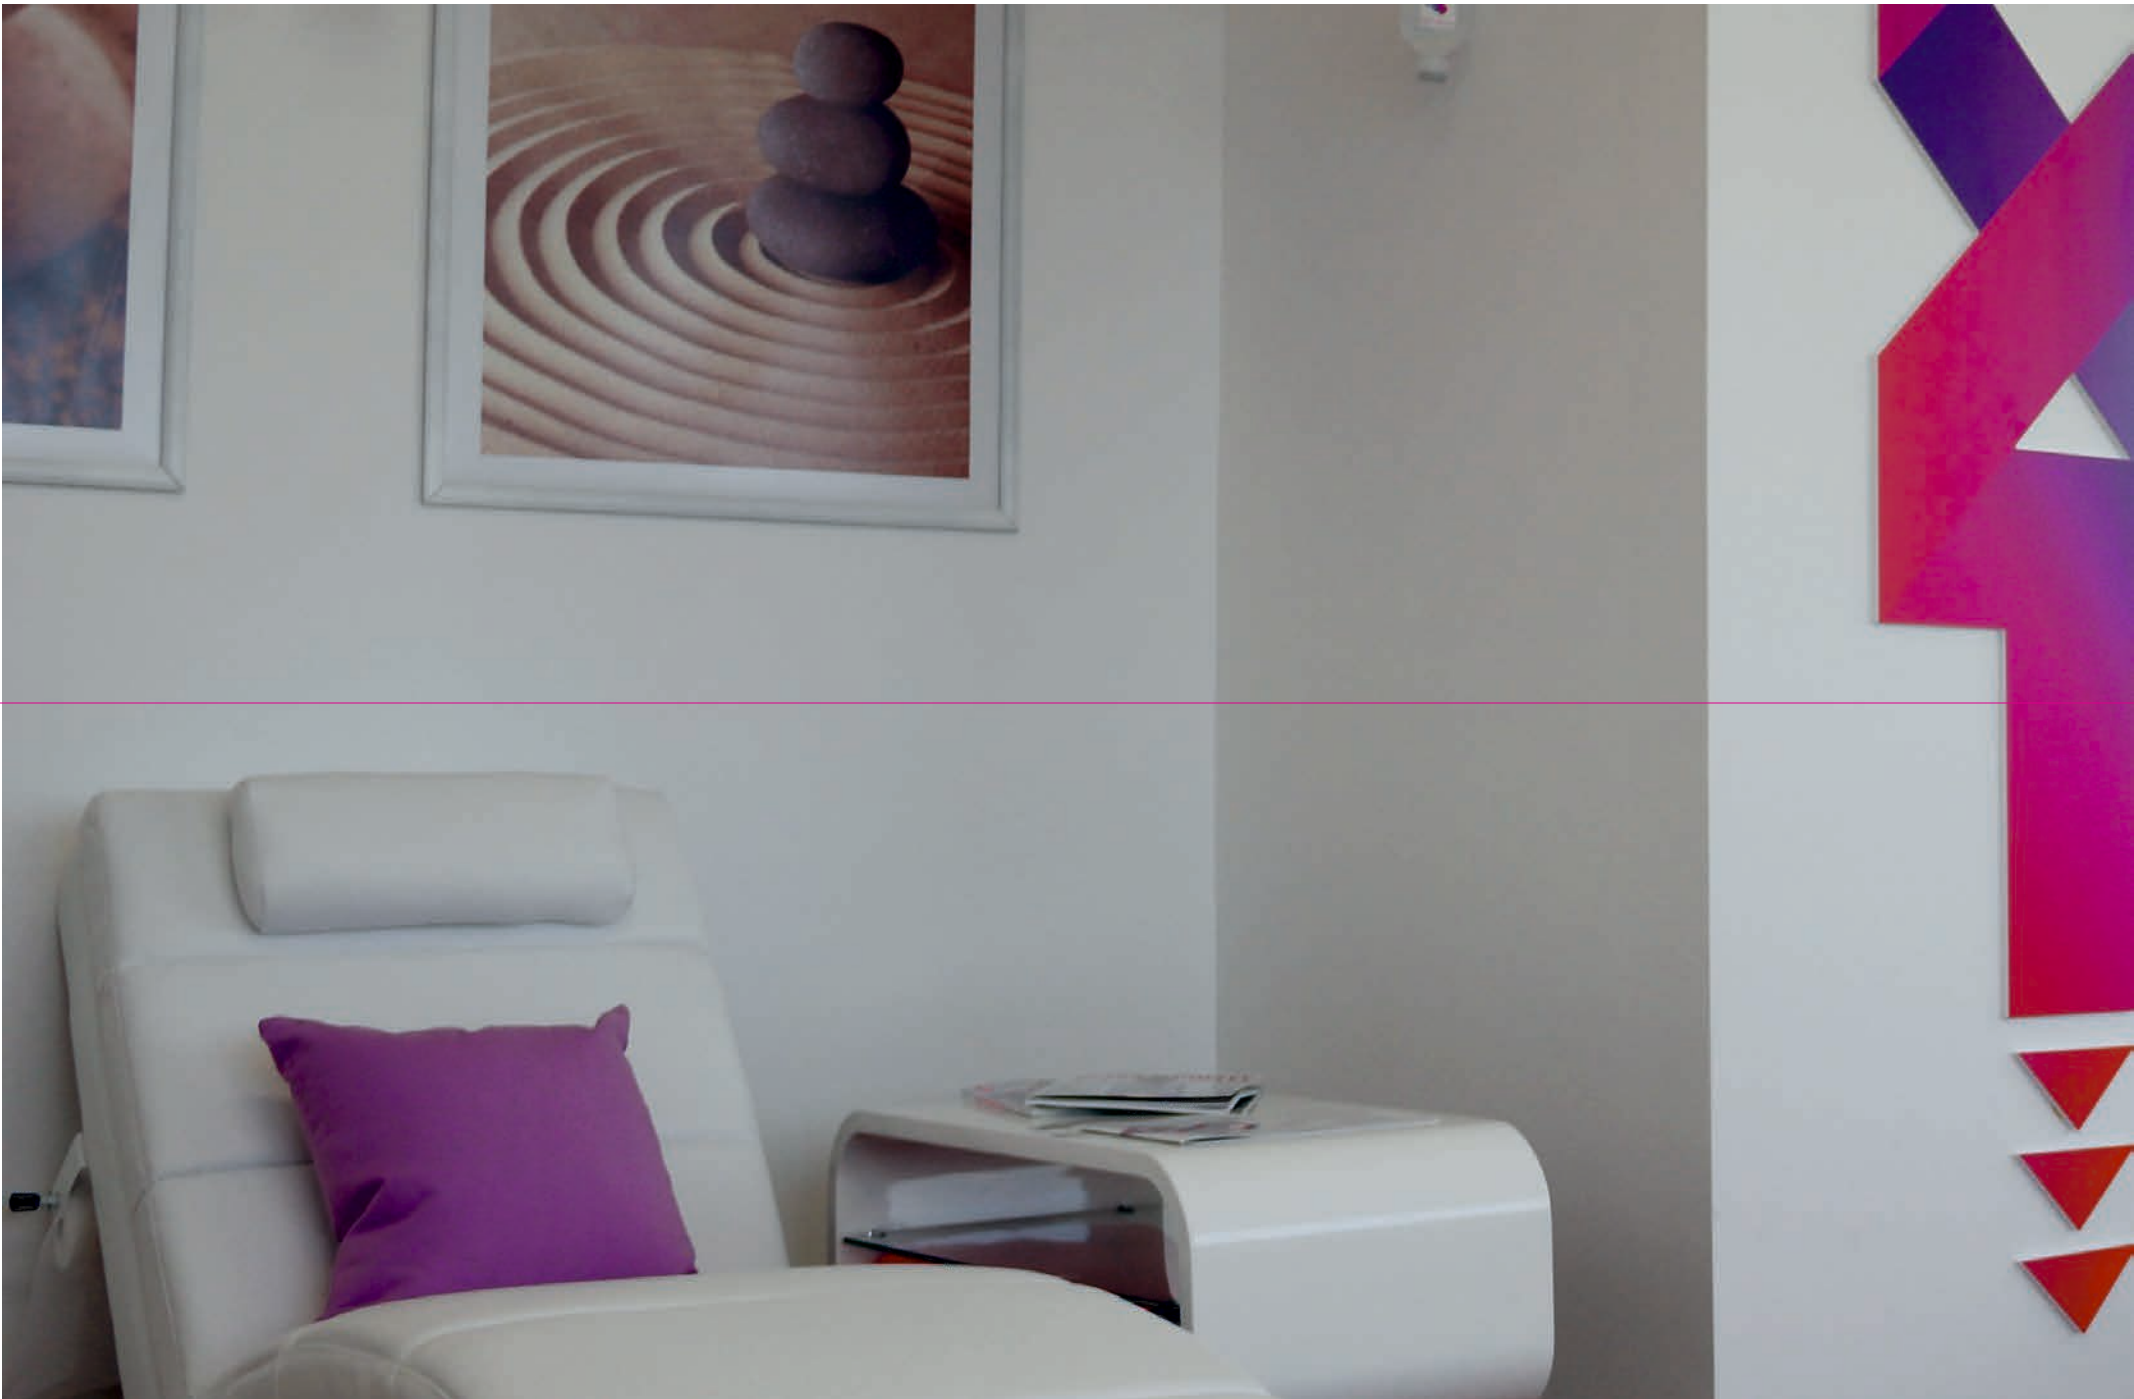

WHAT YOU SHOULD KNOW

There is nothing to worry about.
Intravenous therapies are safe with immediate and visible results.

INTRAVENOUS

THERAPY

PRE - VITAL
PREVENTION - VITALITY
Prevention and vitality
are the two main objectives for Prevital.

What is intravenous therapy?

Give yourself a powerful immune system
and an energy boost in just a few hours.

Intravenous therapy has been used for many years. Current needs and demanding life style have created a new type of therapy, by infusing nutrients and refreshing substances into the bloodstream, which we all need on a daily basis in order to feel healthy and well. As a result, this method offers 100% absorption of the elements needed by our body in only a few minutes, as well as effective and continuous action.

This results in rapid healing and
rehabilitation without wasting time, which
is exactly what modern people need.

Do you want to overcome Jetlag? Do you wish to improve your physical stamina on a hardworking day or a day of excessive entertainment? Do you wish to eliminate hangover symptoms in only a few minutes? Do you want to increase your libido? Do you want to minimize the symptoms of excessive training or a particular disease? Intravenous therapy is the answer to all these questions.

Who is it addressed to?

Intravenous therapies are suitable for everyone.

Intravenous therapies are suitable for people over 18 years old, who wish to enhance their immune system and enrich their body with the necessary elements, required on a daily basis.

It is suitable for people who suffer from diseases, people with poor diet who do not take proper rest, and hard-working people, people who train often or travel a lot, people who want to increase their libido, their energy levels for entertainment or other reasons.

In a preventive way, it may also be used by all family members in order to improve body resistance to colds and flues.

Intravenous therapies constitute a new way of life that improves your health and wellbeing on a daily basis.

What it offers

Immediate intake of vitamins
and essential elements for your body.

Intravenous therapy has the privilege to bypass human digestive system, since nutrients are administered directly into the bloodstream.

Therefore, they reach your body 100% intact without any loss.

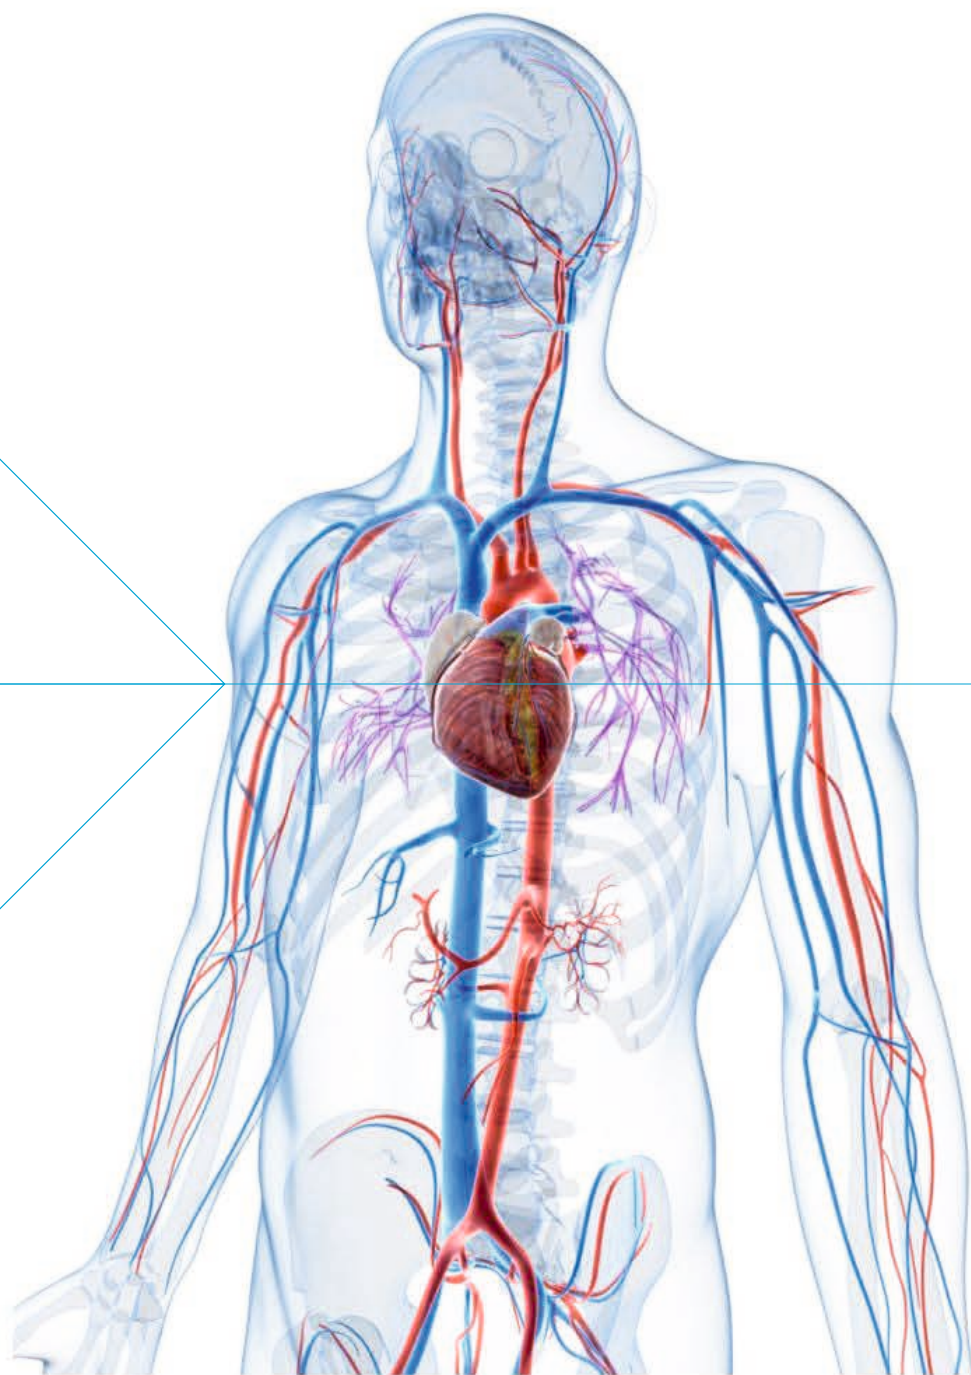

This is called bio-availability, which is something that only a few preparations and products offer

That means that every infusion offers you 100% of the vitamins, minerals and hydrations that the solution offers and not a molecule less.

Intravenous therapy offers 100% treatment effects and much more duration, in a minimum time compared to other products that promise wellbeing, energy and relief.

If we could only use one sentence to express what intravenous therapy offers, that would be:

"Quick action and immediate results"

Implementation of Intravenous Therapy

Intravenous therapy does not require special preparation.
Benefits run in your blood in a short time.

Infusions start by inserting a very small needle into the upper limb. The catheter is so small that it rarely draws your attention.

The insertion site is always sterilized and previously numbed with a local anesthetic in order to ensure your comfort and safety. Insertion is performed only by appropriately trained medical personnel.

Depending on the type of therapy you choose, infusions may take 30 to 45 minutes.

After removing the special catheter you may continue to enjoy the feeling of relaxation or vitality induced by the respective serum.

What you should know

There is no need to worry about anything.
Intravenous therapies are safe and offer immediate effects.

Intravenous therapies are considered a revolution in modern medicine. It requires minimum time corresponding to the ml of the serum you have chosen, in order to enter into your bloodstream.

Before any other treatment, you will be fully informed regarding the ingredients of the intravenous treatment, and of course, medical background or any particular allergies are always taken under consideration.

Intravenous therapies may be administered to all family members even in order to strengthen your immune system in combination with sophisticated diagnostic devices in Prevital.

Prior to every IV therapy administration, you are required to fulfil and sign the appropriate documents indicating possible medical conditions and the fact that you consent to the particular infusion process.

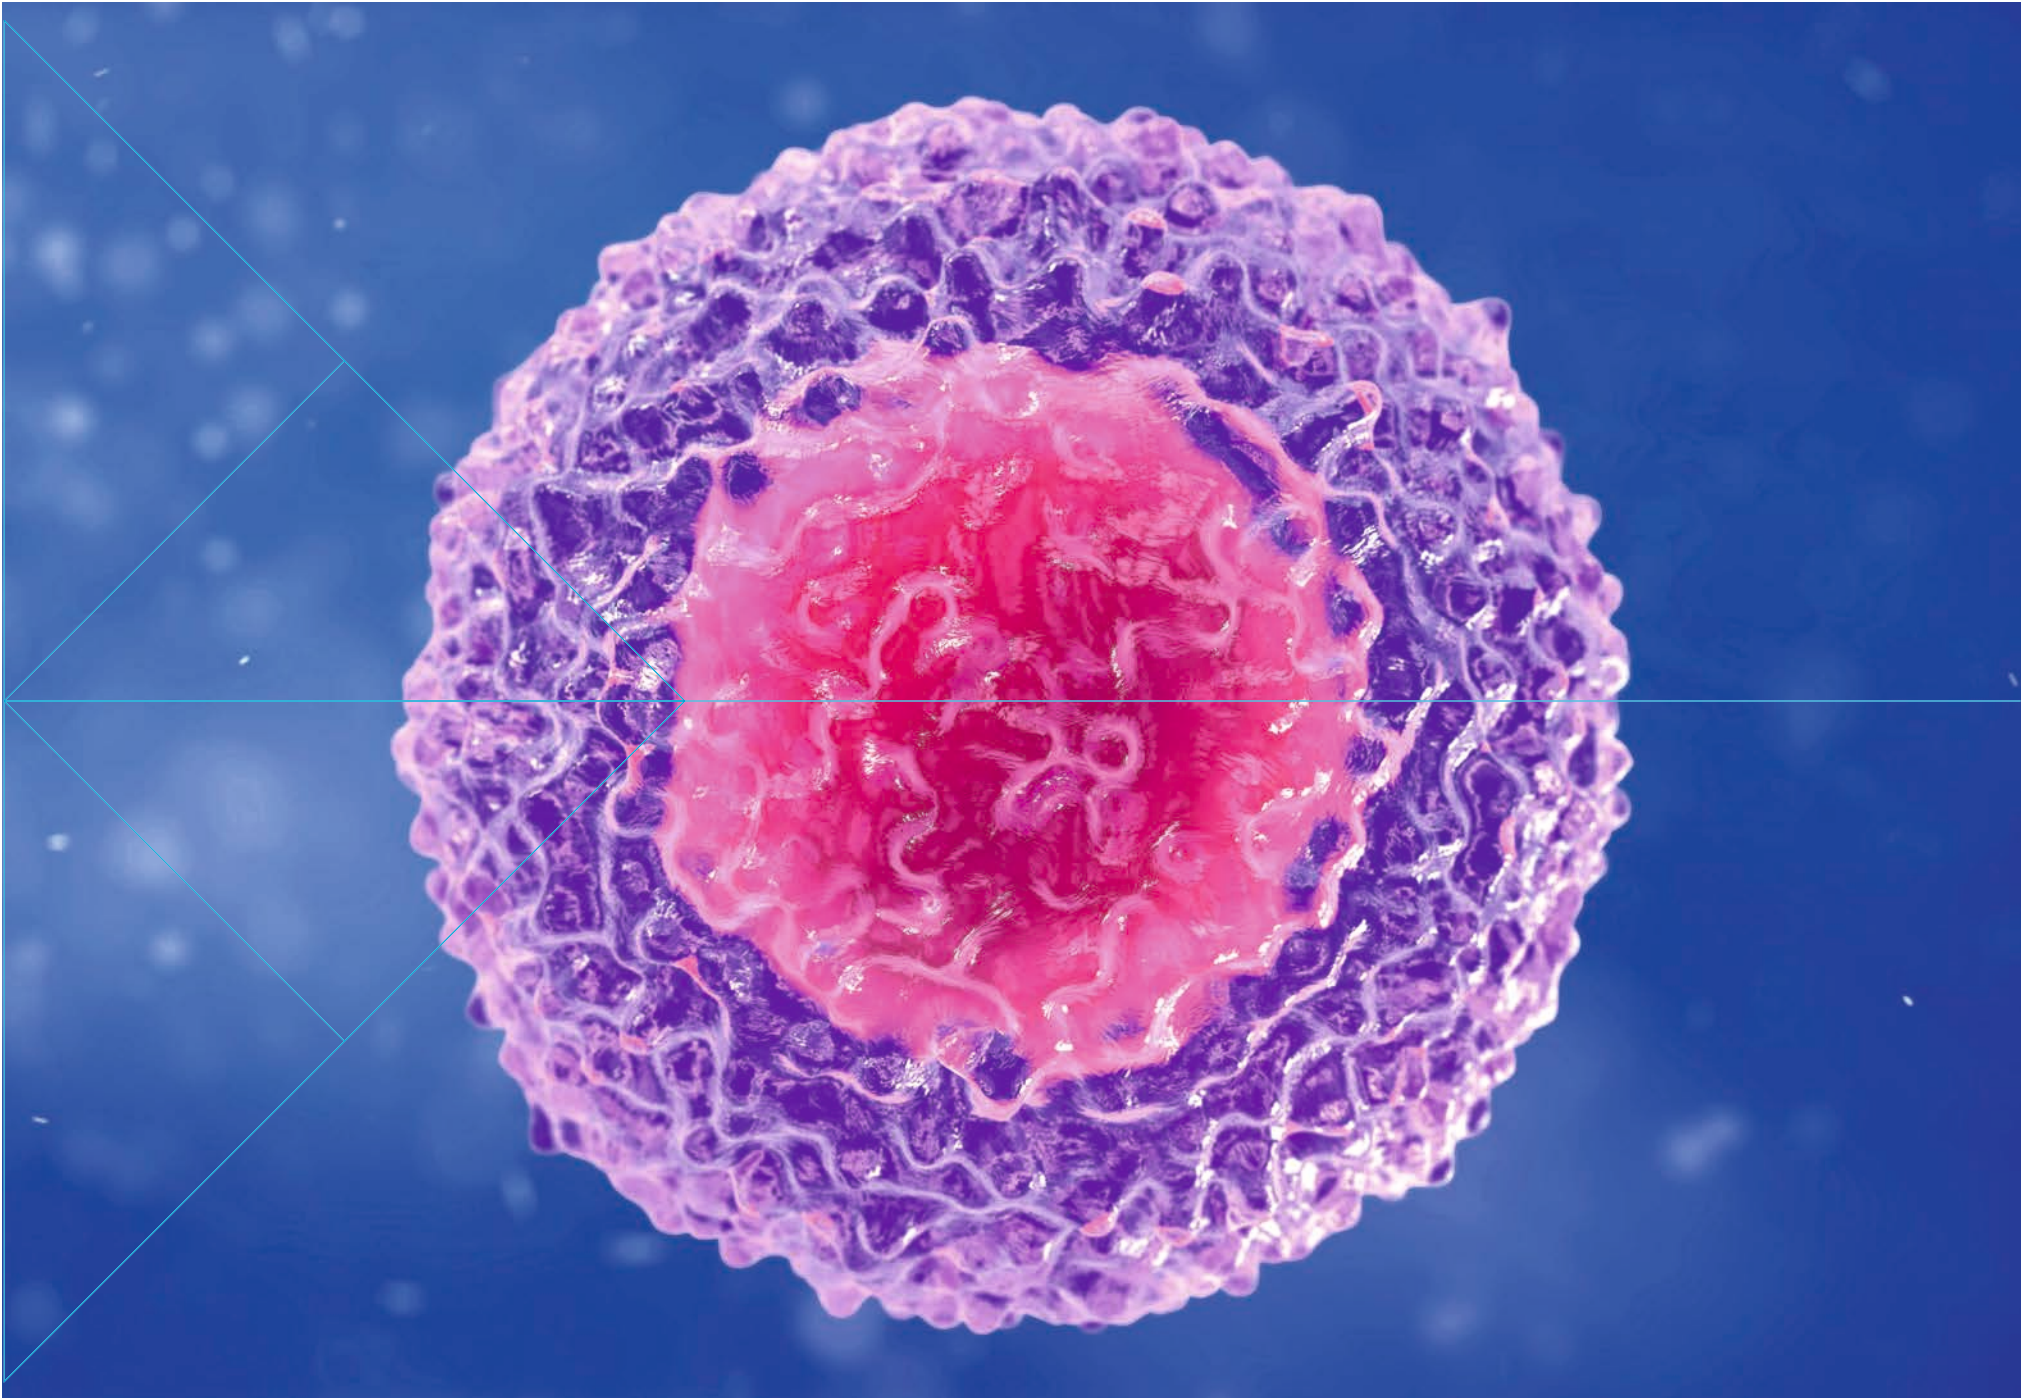

Intravenous Therapy RE-inforce

Maximum Health + Enhancement + Required Vitamins

Do you feel worn out by a flu, or you simply don't have the luxury to let it get you down? RE-inforce will offer you a high dose of Vitamin C and powerful antioxidants, strengthening your immune system in order to keep doing the important things that you do.

The combination of Vitamins C and glutathione will give
you a feeling of relaxation, revitalization and
invigoration. RE-charge can get you out of your bed
and open up a world full of energy, potentials and
opportunities.

Intravenous Therapy RE-balance

Balance of the “brain”
Overcome your stress and anxiety

Researches have shown that the combination of vitamins with amino acids results to the enhancement and improvement of brain functions. RE-balance has been specially designed in order to provide mental clarity, balance in stressful situations, concentration, as well as quality sleep at nights.

Benefits:

- ▶ Reduced stress, depression and anxiety.
- ▶ It enhances physical brain status.
- ▶ It balances mental health

Intravenous Therapy

RE-lieve

Get rid of migraines

Magnesium is a vital element for many enzymatic reactions and processes in the body and it is crucial for muscular and vascular relaxation.

Magnesium may have decisive influence on various forms of pain including migraine.

RE-lieve also includes Vitamin B, which has been shown to reduce and accelerate migraine's cycle of pain.

Major relief within 30 to 60 minutes following intravenous administration of RE-lieve has been observed.

Intravenous Therapy

RE-shine

Radiant and healthy skin

Glutathione is one of the most powerful antioxidants. It binds to free radicals, which is a necessary process for the removal of toxins at a cellular level.

Oral intake of glutathione is not absorbed as easily as when administered intravenously.

Therefore, an IV glutathione therapy is administered in order to ensure the immediate effect of this powerful antioxidant on cells through bloodstream.

Intravenous administration is a powerful combination that is equally distributed in order to eliminate oxidized – damaged cells (which cause skin discontinuities) in a natural, safe and, even manner, offering radiance and hydration.

The effects of glutathione on the skin

The color of the skin is determined by the production of melanin, which is produced in melanocytes at the bottom layer of the skin. Increased levels of melanin in the body means a respectively darker skin color. Glutathione inhibits the production of melanin therefore reducing the concentration pigmentation.

As a result it offers a radiant skin and contributes to an even skin tone. Glutathione may also be used along with Vitamin C, as an even more potent combination, which slows down the development of free radicals that damage collagen and cause skin dryness, thin lines and wrinkles.

This potent combination is evenly distributed to the whole body when administered intravenously, in order to eliminate oxidized – damaged cells (responsible for the darker skin color). This way it helps you acquire a radiant and hydrated skin in a natural, safe and even way.

Benefits may include:

- ▶ More white skin
- ▶ Removal of skin-spots
- ▶ Collagen production for the enhancement of elasticity
- ▶ Elimination of acne
- ▶ Improved immunity
- ▶ Improved energy levels and reduced fatigue
- ▶ Improved quality of skin texture
- ▶ Enhanced radiance, radiant and hydrated skin
- ▶ Reduction of thin lined and wrinkles

Intravenous Therapy

RE-calm

Enjoy quality sleep

A combination of natural sedatives, vitamins and magnesium to relax your nervous system, reduce your anxiety and improve your quality of sleep.
